

## The Maritime Consultants

Burness Corlett Three Quays, BCTQ, was created as the result of the merging of two of the most established marine sector organisations – Burness Corlett & Partners and Three Quays Marine Services - to create one of the largest specialist companies of its kind in the world.

Burness Corlett & Partners was established in 1952 as naval architects and marine engineers and has since developed a worldwide reputation for providing reliable, innovative and cost effective solutions to the maritime sector. In 2005 Burness Corlett amalgamated with Three Quays Marine Services, the former technical services division of P&O, responsible for the design and development of P&O's vast fleet of passenger

and cargo vessels, associated products and services. Merging Burness Corlett & Partners with Three Quays Marine Services formed BCTQ, one of the world's leading fully integrated maritime consultancies was created, with the capability and capacity to offer the largest variety of maritime sector services and products. BCTQ now possesses a worldwide team of professionals working on a variety of marine projects

from roll on roll off, cargo, oil and gas, defence and port systems, to large commercial passenger vessels and large luxury yachts. With UK offices in London, Southampton, Bristol, Isle of Man and Newcastle upon Tyne and international offices in Dubai and Sydney, BCTQ follows a continuous programme of identifying new market opportunities and as such is broadening its reach into new geographic areas across the globe.

The name Burness Corlett Three Quays is synonymous with naval architecture and vessel design. Throughout its history, the firm has designed thousands of vessels of every possible type, from Ro-Ro ferries, bulk carriers and tankers, to high speed catamarans and luxury yachts. Our large international team of naval architects includes some of the most experienced professionals in the sector covering the commercial and large luxury yacht categories.

BCTQ's Marine Survey Services division is involved in a wide variety of projects on every type of vessel carrying out pre-purchase inspections, asset protection monitoring, hull and machinery damage surveys through a rapid response programme worldwide. In addition the group's Marine Expert Services division is a world leading consultancy which focuses on the provision of expert witness, forensic engineering, advanced computational analysis and associated services.
